PROJECTS

Food Barcode Scanner App –

Building a barcode scanning application with user authentication, CRUD functionality, and frontend/backend integration using Spring Boot.

“FunHub” project –

Working on a side project to learn full stack development with React and Spring Boot with external API integration.

Authentication System –

Developed secure signup/login systems with BCrypt password hashing, validation, and API communication using Java and JavaScript.

Student Accommodation Finder –

Worked on unit testing (JUnit 5 & Mockito), GUI support, and database integration in a team of six.
